

## Instructions for Care Textile Motorcycle Clothing

**The product-life of every piece of clothing also depends on the correct maintenance.  
So please always note the tags sewn into the clothing**

The function of the GORE-TEX® membrane will remain intact even after washing several times.  
Before washing the motorcycle clothing, first remove the fall-pads and the protectors always

### **Washing:**

Please make sure that you pay attention to the care-label sewn into the clothing!

If not stated otherwise, wash it in the washing machine with a mild detergent in a delicate machine cycle at up to 30°C.

Pre-treat heaving soiling with a detergent booster and also stains with a commercial stain remover.

In order to avoid detergent residue on the GORE-TEX® material, please rinse sufficiently (Repeat the rinsing process).

### **Ironing:**

By ironing (without steam) as per care-label or in the dryer at a low temperature, you can reactivate the water-repellent impregnation effect.

### **Laundry Dryer:**

Dry at low drum filling and at low temperature.

### **Bleaching:**

Do not use any chlorine bleach.

### **Dry-cleaning:**

If it is not specified otherwise on the care-label, cleaning is possible. However washing in the washing machine is preferred.

### **Waterproofing:**

Impregnation does not impair the function of the GORE-TEX® membrane in any way. Quite the contrary, well-impregnated clothing repels dirt and water. A wet shell fabric causes heat loss. A good impregnation therefore protects from the cold as well. The shell fabric of the clothing with GORE-TEX® materials are already protected with waterproofing during the manufacture.

However since this waterproofing is not sustained permanently, the clothing should be handled after washing with

a commercial waterproofing spray if the water does not run off any more from the shell fabric.

Use silicone-free impregnation; spray it on after washing and allow it to dry. Activate the water-repellent impregnation effect by ironing (without steam) as per the care-label or in the dryer, at low temperature.

After about 2-3 washes, the clothing should be waterproof again.

**Advice: Maintenance is better when done often  
and with less detergent than seldom  
with a lot of detergent.**

### **Repair:**

In spite of all the caution, the clothing can become damaged. Even small tears and holes cause water to get inside, in the case of water-proof clothing. Due to the special construction of the GORE-TEX® clothing, such damages should be repaired only by a specialized person. In this case, please contact your specialist dealer or our sales team.

### **Attention!**

**Only washed clothes will be repaired!**
